

KEMA COATINGS LIMITED

An Introduction to *KEMA* Coatings Limited of Canada

KEMA Coatings Limited, a Canadian company, develops and manufactures high performance, multi-functional, organic barrier coatings and linings which are suitable for medium to extreme service conditions.

Our proprietary coatings protect both metal and concrete surfaces from decay (including corrosion and erosion) by blocking environmental attacks where aggressive chemical solutions and gases, mechanical forces and high temperatures are at play.

We serve a number of diversified industries that include: energy; transportation; water; pulp and paper; chemical processing; mining and refining; and, power generation.

KEMA Coatings owns international patents on innovative, field-applied, composite coating technology. This novel process complements plant-applied two, three and four layer coating systems. We have also collaborated with both powder and liquid coating applicators worldwide to complete highly efficient in-plant, liquid coating product lines.

The *KEMA* Service Group operates outside the static coating mill and in remote liquid coating installations. We both design and build portable cleaning and coating equipment for this purpose.

The Company has an international customer base and we continue to provide solutions for their corrosion and wear-related problems in Canada, The United States, Colombia, Bolivia, Kuwait, Saudi Arabia, Pakistan, Iran, Thailand and China.

We promote a number of different working relationships in foreign countries that have included: Joint ventures; Technology transfers; Licensing and royalty rights programs; Toll manufacturing; New coating product formulation and development; Plant set-ups; Equipment sales; and both, Exclusive and non-exclusive agency agreements.
